Why Should You Opt for a Commercial Grade Shade Sail?

Shade sails have become increasingly popular as they help keep your outdoor spaces pleasant in the scorching summer heat. Both residential and commercial applications of sail shades make them worthy of investment. When it comes to commercial shade sail structures, they are often recommended because they are built sturdy and last longer, even in the harshest of environments. Whether you need a stylish shade sail for nurseries and schools or restaurants and shops, you can order bespoke designs tailored to your specific needs.

Why Choose Commercial Grade Shade Sails?

Commercial grade shade sails are a perfect investment as they offer protection against harmful UV rays for years to come. They are made with durability and quality in mind, with plenty of customization options on offer. Let's explore more about commercial canopy structures and why they should be your preferred pick.

1. Excellent UV Protection

A commercial-grade shade canopy is the ultimate solution to protect your customers and outdoor structures against harmful UV rays. More than a simple sunshade, these canopy structures offer the best UV protection, durability, and reliability.

Most commercial-grade shade canopies are made using UV-stabilized high-density polyethylene fabric. They don't absorb moisture and are rot-resistant. Their high-end double-lock stitching reduces the chances of tears. You also get extra security through their color-keyed seatbelt edge webbing.

To take UV protection to the next level, many shade sails have tap yarn weaved into them, blocking as much as 98.8% of the harmful UV rays from the sun.

2. Bespoke Designs Tailored To Your Needs

Today, you can buy bespoke commercial-grade sun sail shades tailored to your requirements. Regardless of the shape and size you need, the canopy structure is custom designed for you. You only need to work with a reliable provider, and they will design shade sails that are a perfect fit for your outdoor spaces, no matter what shape or size you might need. Furthermore, you also get the option to choose from various colors.

3. Preserving Your Property

While many believe that UV rays are only dangerous for humans, they affect all ecosystems, living things, and even non-living things, such as your property. Cars parked in the open parking lots often see their paint chipping off easily. Similarly, carpets that get direct sun exposure every day tend to fade quickly, and their fibers rapidly lose their strength.

Recent studies have concluded that other materials like polyester, plastics, and glass are also subjected to UV degradation when they get direct sunlight. UV rays change them physically and affect their chemical and mechanical properties. So, if you often want to avoid replacing your fixtures and furniture, an investment in commercial outdoor shade structures for your office or store is well worth it.

4. Reduced Electricity Costs

On hot summer days, your power consumption automatically sees an upward spike as you are forced to run your air conditioning system at its full capacity to create a comfortable environment for your customers and staff. Want to bring your power consumption down and cut costs? Invest in commercial-grade shade sails to effectively cool your covered areas. It will effectively help bring your operational costs down.

Depending on the weather conditions in your area and the installation quality, you can expect the shade sails to serve you for 10-15 years. Just choose the right company for your installation, and your shade sails will serve you for years to come, ensuring significant cost savings.

5. Creating Stylish, Multi-functional Covered Spaces

Commercial grade sun sail shades allow you to style your store the way you like. They can be used for creating stylish-looking multi-functional covered areas. Use your shade sails for parking lot covers, stylish awnings, and expansions. Many restaurants and cafes use elegant shade umbrellas, creatively adding space to host more customers without building any new structures. Commercial shade sails installed in the garden can be used in many ways, like a party venue, meeting space, barbecue area, yoga place, or playground.

6. Durable Shade Sails That Are Made To Last

Commercial grade shade sails are an investment that will serve you in years to come. With most high-quality shade sail structures expected to last for around 10-15 years, they pay off well.

When you opt for commercial-grade sails, you automatically choose something more sturdy and reliable. It won't just last longer but will give your customers a great, comfortable experience outdoors, earning you their loyalty.

The Most Common Applications Of Commercial Grade Shade Sails

One of the main reasons for installing commercial steel shade structures is that they can have countless applications in various commercial and non-commercial settings. There's no need to limit your imagination on how you can use the shade sails. From decks, pools, and patios to gardens and more, the applications are limitless.
